

COIS1020H Lab Checklist

1. Be sure to sign the attendance sheet (only available in the first of the two sessions of each lab). If the attendance sheet is not signed, assumption is that you did not attend and will receive a 0 for the lab.
2. Use the Lab Answer Document (Word doc file) available for each lab to answer the questions from the lab. Submit a pdf of this when you have completed the lab.
3. Also provide text files (.txt) which contain some or all of the code for programs in the lab. You can cut and paste it into C# to reduce the time (and errors).
4. “What is the output ?”: For this question in the lab, we are expecting to see the complete contents of the output window (not just the final result of the program). No screenshots please, unless asked in order to keep the uploaded pdf file size small.
5. Add `Console.ReadLine()` to the end the program to keep allow the output window to remain open after running the program.
6. Each lab will require students to upload .cs and .pdf file. Upload all files in a single attempt/submission. If you have to make any corrections, please upload ALL files again in another submission.
7. Each lab has a demonstration component that is marked. Please ensure that you complete this (if you are not able to demo in the first week, you can do it in the second week).
8. If you need any help or clarification during the lab, please ask.
9. Be sure to check Lab Rubric for feedback. A solution document will be available on BlackBoard after the lab marking has been completed (typically, a week after the due date). Any concerns: ronaldjhurley@trentu.ca
